

## Windows Telix Shipbroking Suite **AutoRead<sup>®</sup> the Orders in your Messages!**

Shipbrokers are stormed with a plethora of messages. Some thousands of incoming messages per day need to be reviewed and handpicked to find out how to cover the requirements of your clients, spot the matching opportunities, eliminate duplicate information and noise, essentially to put structure to a great deal of unstructured information and communicate these efficiently.

**AutoRead<sup>®</sup>** can silently scan all your incoming messages and translate these to orders, useful information appropriately commented and classified.

**LgOrders<sup>®</sup>** is assisting brokers to manage information related to orders and cargoes. Examine your data by type, date, size, origin, destination, commissions, source, account, etc and summarize to a report, a message or a circular list ready to be forwarded.

It takes less than a minute of human effort to examine your orders out of thousand messages. Shipbrokers can thus immediately advise their clients on how to take advantage of the best opportunities.
