Customizability is key

At the core of every professional's daily routine, is an inbox which should cater to their needs. Lgmar Software listens to users, captures the subtle details of their workflows and strives to deliver an optimal, fully-customizable solution. We are committed to evolving our email client into a tool that is intuitive, efficient, and tailored to each individual's unique needs.

A Fluid Inbox Experience

- **Vertical or Horizontal Layout** – Choose the view that suits the way you scan information.
- **Customizable Columns** – Decide which data appears in your inbox and their order.
- **Save and Reuse Search Filters** – Build your individual search queries, which you or your department uses most and save them.

Organization Tools That Follow Your Workflow

- Tagging - Use tags for your projects, vessels and categorize using one or in combination.
- **Folders that Fit Your Needs**– Create folders for your messages and customize depending on whether the company, a department or only you should have access.
- Rules per person - Customize rules depending on your professional requirements and use in conjunction with tags, searches and folders.
- **Per Account Signatures** – Have a different signature to each email account.

Smart, Flexible Automation

AI has moved from a nice add-on to a true collaboration partner. That's why our client-centered design also includes:

- **Multiple AI Provider Options** – Choose and add multiple AI provider you prefer to use.
- **Prompt Templates** – Store a library of prompts for quicker operations, e.g. , ask the AI to rewrite a message or generate a response in a single click.

Why Customization Matters

A highly customizable email client adapts to you, not the other way around.

- **Less friction** – The more your email client is tailored to your needs, the less mental load.
- **Higher productivity** – Quick access to the information you need, plus AI-assisted drafting, frees up time for high-value tasks.
- **Consistent empowerment** – Every team member can set up their own “sweet spot,” so collaboration happens on common ground, not forced standardization.
